EDUCATION

National Institute of Technology Silchar

Silchar, Assam

B.Tech in Computer Science and Engineering

Expected May 2028

CGPA: 8.42/10

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Discrete Mathematics, Probability & Statistics

Sivasagar Govt HS and MP School

Sivasagar, Assam

Higher Secondary Education

Percentage: 86%

TECHNICAL SKILLS

Programming: Python, C, C++, HTML, SQL

Libraries & Tools: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Git, Streamlit, OpenCV, Ultralytics

Machine Learning: Supervised Learning, Unsupervised Learning, Reinforcement Learning, Deep Learning, NLP, Feature Engineering, Model Evaluation, Hyperparameter Tuning

Databases: MySQL

Core Concepts: Data Structures, Algorithms, Object-Oriented Programming, Problem Solving

PROJECTS

NidracareAI – Sleep Disorder Detection System (GitHub)

Python, Pandas, NumPy, Scikit-learn, Logistic Regression

- Built a machine learning classification model to detect sleep disorders using a dataset of 500+ health records.
- Performed data preprocessing, feature engineering, and normalization using Pandas and NumPy.
- Trained a Logistic Regression model and evaluated performance using accuracy, precision, recall and F1-score metrics.
- Achieved approximately 90% classification accuracy after model evaluation and tuning.

Netflix Data Analysis and Visualization (GitHub)

Python, Pandas, Matplotlib, Seaborn

- Conducted exploratory data analysis on a Netflix dataset containing 8,807 titles.
- Cleaned and transformed raw data using Pandas and NumPy.
- Created multiple visualizations using Matplotlib and Seaborn to identify genre distribution and content trends.

AI-Based Smart Traffic Management System (GitHub)

Python, YOLO, OpenCV, Streamlit, Ultralytics

- Implemented YOLO-based vehicle detection to analyze traffic density at road intersections.
- Counted vehicles across multiple lanes using computer vision techniques.
- Generated adaptive traffic signal recommendations to prioritize congested lanes.
- Built a Streamlit dashboard for real-time traffic visualization and monitoring.

Branch Society Chatbot (Live Demo)

Dialogflow, JavaScript, HTML

- Developed a chatbot for the Computer Science Society to automate responses for student queries.
- Designed intent-based conversational flows for FAQs, announcements and event information.
- Integrated the chatbot into the official CSS website to improve student communication.

ACHIEVEMENTS

- Second Position — Datathon Model Training Competition (CSS ML Wing)
- Third Position — Intra CSS Hacks Hackathon

POSITIONS OF RESPONSIBILITY

Member — ML Wing, Computer Science Society (CSS), NIT Silchar

- Participate in machine learning discussions, competitions and collaborative model development sessions.
